

# CHRYSANTHEMUM

## COLOURS & FORMS HANDBOOK

# Just chrysanthemum

**FOR THE WIN!**

## Provided by Chryson Foundation

A collaboration between all Dutch chrysanthemum growers and the chrysanthemum breeders Armada, Dekker Chrysanten, Deliflor Chrysanten, Dümmer Orange, Floritec, Royal van Zanten

2022

The Chryson Foundation campaign 'Just Chrysanthemum' is supported by:

The chrysanthemum offers every ingredient required for success: volume, colour and texture at an affordable price. It wins customers by allowing you to create spellbinding floral designs with more bang-for-buck.

You'll be surprised at the choice. The rich colour palette and wide array of flower forms and sizes means many chrysanthemums can pass as perfect substitutes for premium stems. In this handbook you can discover the wide spectrum of varieties.

The chrysanthemum range is constantly developing.

You can find the most up-to-date listings at [www.justchrys.com](http://www.justchrys.com) where you can also download free floral photography, a digital version of this handbook, and marketing materials to support your own business.

Need inspiration?

Visit our social channels (@justchrysanthemum) and discover the 1001 possibilities with chrysanthemums.

**@JUSTCHRYSANTHEMUM**

# How it works

This handbook contains more than 300 chrysanthemums, sorted by colour.  
There are different types of chrysanthemum within each colour:

## disbud

One flower per stem

## spray

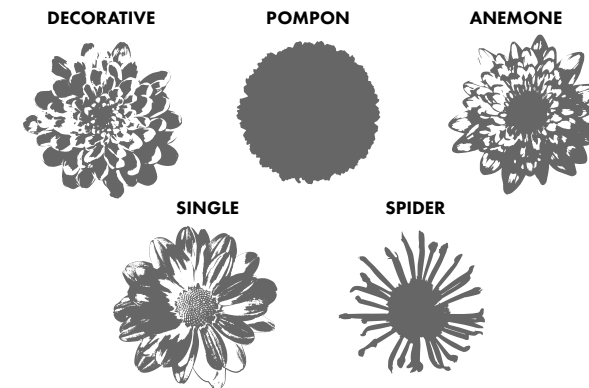

A flower head with multiple flowers per stem

## santini

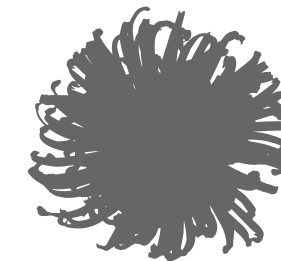

A flower head with abundant smaller flowers, leaves are slightly more delicate and the stem is slightly shorter

## forms

We distinguish between different forms within the chrysanthemum range

## key

Dutch chrysanthemumgrowers are making a lot of progress together in terms of **sustainability**. This includes biological pest control, closed watersystems, heat storage, and investments in equipment and new cultivation techniques with which they are achieving substantial energy and carbon reductions. The Dutch growers mainly produce for the European market. This means that they can keep the carbon footprint of their logistics as low as possible.
